Ive needed to replace the blades several times, of course, but overall its worked very well over time without any issue. Except the batteries. One of my favorite features was the batteries, meaning it need be plugged in only to charge, not to use. But the

batteries didnt last. I finally decided to see if I could do something about it. It complained of a bad similar explanation on eHow which Ive not read, which referenced a manual without any instructions. So I found the Braun SyncroPro Manual and indeed, it has no instructions to describe replacing the

batteries. <http://www.systemphaenomen.de/fckdata/craftsman-12-inch-table-saw-manual.xml>

But the Korean Syncro Manual does have these instructions, on page seven. Its got unrelated English text on the page, but its a nice visual description of the necessary steps. I found that prying the outermost cap step 2 works best by grabbing the inner edge of the opening for the plug. I couldnt confidently get something around the edge like pictured without damaging it. Once that cap is off, the sides come off easily by hand, and some T9 torx screws hold the back on. With that removed the power board comes right out, its held in place only by the structure just disassembled. With some replacement NiMH batteries in hand, I cleaned their terminals and heavily tinned them with solder, then set them next to the tinned tabs, then heated the whole lot until the solder melted together again. The original batteries were also stuck down with adhesive; some hot glue took that place with my replacements. I delayed this repair so long, it will actually be hard to get used to. center that might be able to help you out. I've used them several times to get repairs done on my husband's shavers. They are honest and very helpful. You might try them. Their link is www.shavtronics.com. I know what you mean by expensive. But I guess if you add up all the blades they add up too. Hope this helps. Thanks for the help. Click to expand. I've replaced the one in my Braun once and the shaver is still going after 5 years. You have to be careful when soldering batteries without tabs best to buy a battery with tabs, but it can be done. Google for details, or post here that you intend to replace the battery and I'll describe it. I wouldn't ask a question here if I hadn't done that already. The model takes into account factors including the age of a rating, whether the ratings are from verified purchasers, and factors that establish reviewer trustworthiness. See All Buying Options Add to Wish List Disabling it will result in some disabled or missing features. You can still see all customer reviews for the product. When I do charge it up the charge lasts a long time. The shave is close, but not uncomfortably so, even with a very tough beard like mine. I use Amazon for most of my purchases and update my reviews if anything changes with the products.

<http://gerryikputuandpartners.com/images/802-vlz-4-manual.pdf>

I do this so other Amazon users can get a real feel for the life of the product. You can look at my review which will be close to my purchase date and tell how the product is doing as time passes. I am not associated with any company and all opinions are my very own. Reviewed in the United States on September 29, 2007 I have been using Braun shavers for a while. I thought this is going to be better than the one I had before. Indeed, it shaves well, but to my horror, the fancy transformer stopped working completely after only using it for about 6 months. I would not buy anything Braun produces that has this fancy looking small and quite voltage converter that sends a direct current to the battery inside the shaver. Save your money!! Don't buy this thing! Please try again later. tikcuf 5.0 out of 5 stars Please try again later. Please try again later. Virginia Reviewer 5.0 out of 5 stars I wanted to know the difference between men's and women's razors. I read that men's are better suited to coarser hair. Well, my leg hair is coarse enough to be a man's beard, so I got a men's shaver. This thing works! If I shave my legs right after I get out of the shower after drying off, my legs are just as smooth for just as long as with a standard razor. And even completely dry, I get a smooth shave. It's a great leg's razor. Please try again later. Please try again later. J. Kohari 5.0 out of 5 stars It maintains a strong charge based on the amount of time I use it each morning for at least a week. The screen looks and feels more durable and comfortable, and the raised ridges along the side of the razor seem to be a bit more pronounced and therefore much easier to grip. The shaver is very easy to clean, and the various settings and adjustments make it incredibly versatile and useful for edging around sideburns and getting those tough spots under your nose and on your neck. A great product I'll be recommending this to everyone. Please try again later. Please try again later. A. Brown 4.

0 out of 5 stars I give it 4 stars instead of 5 only because it's still not as good as a blade and it takes some persistence to really get some of the flat-lying hairs on my neck. It is definitely better than other electric shavers I have used, although I swore them off for poor performance and haven't used one regularly for probably 10 years. I bought this shaver since I do a fair amount of travel, and it's easier to carry on an electric with all the restrictions these days. The unit is pretty lightweight none of the fancy charging bases and cleaning solutions to weigh you down. The non-rigid carrying case is easy to pack in amongst other stuff. For me, the razor held a charge for about 10 days of pretty extensive use, working well for me right up to the time the battery died a quick death. A couple hours of charge and it was good to go for another 10 days or more. My first charge was done in India, and as

advertised the shaver dealt well with the higher voltage electricity. If you want a good, reliable, no frills shaver, this seems like a good bet. Please try again later. Please try again later. Henry B. Stelling Jr. 5.0 out of 5 stars To better understand my rating, I use both safety and electric razors. For beards more than a day old I use the safety razor because I can get a smooth shave faster than with the Braun. For a really close shave, I finish with the Braun, usually in the morning after shaving in the evening with a safety razor. I have used many electric shavers this way and rate the 7505 as the best. The 7505 has an excellent trimmer that I would not do without. Because of the way I use an electric razor, I did not purchase the 7526 with the Clean and Change base which is a convenience for those that use only an electric shaver. The extra cost is for the base, since the razors are the same. Manual cleaning is easy and eliminates the requirement to have refill cartridges for the base. Please try again later. Please try again later. J. Morris 5.

0 out of 5 stars The shaving head is very well designed, with an option for the head to pivot to fit my face or lock in place as I work a problem spot. The trimmer is very nicely designed, with the cutting edge at a right angle to the shaver instead of straight like my older shaver. This angle of the trimmer makes it much easier to trim my mustache and beard. As I would expect, the battery charges quickly. I'm getting more than a week on a charge, maybe a couple of weeks. As I'm writing, I can't remember when I charged it last. All in all, this shaver does everything I need it to do well, without the options that would have driven the cost higher. It is not a cheap shaver, but I consider it very well worth the cost. Please try again later. Please try again later. Loving it 4.0 out of 5 stars Get the job done well. Con Could use better grade plastics for the body parts. The plastic parts in the shaving head feel so fragile, look very un-German to me. Quite loud. Coming from Norelco 6886XL, it takes me a while to get used to the Braun's high pitch noise. Did I say it's loud. But after trying the new and flimsy Norelcos, I have no choice but to switch to this Braun. It costs more to service my old Norelco 6886XL. Please try again later. Please try again later. WW 4.0 out of 5 stars The first one lasted about eight years until the battery finally gave up. I then decided to buy a Remington which turned out to be a big mistake as the battery lasted only three years before it died. I decided to come back to Braun and purchased this model with which I am very happy. I get about eight or nine shaves to a charge and the shave is always close and comfortable. Also, I have a mustache and the built-in trimmer comes in handy and does a very accurate job. Braun makes a solid, reliable product and I would highly recommend this model to anyone in the market for a new electric shaver. Please try again later. Please try again later. Shavin Steve 4.

0 out of 5 stars When it's running out of charge, it starts out OK, then dies during the shave. That's annoying. My old Braun had an LCD charge level display. I've been getting about 5 shaves per charge, so I just have to remember to charge it periodically. Oh, and when removing the protective cover, it tends to pop up the shaving head, and drop shavings. Otherwise, I like it, been getting nice close shaves, smooth operation, good trimmer edge, comfortable. Please try again later. Please try again later. F. Smid 5.0 out of 5 stars I recently purchased one to replace my 10 yr old Braun 5520. The rechargeable battery went on the 5520 after 10 yrs of use. The cost of replacing the battery, new blades and foil would have been more expensive than the purchase of the new 7505. Still, I was reluctant to let the old 5520 go because I was so very satisfied with it. I made the right choice, however, as the new 7505 is even better. No complaints. Buy a 7505 and you won't regret it. Please try again later. Please try again later. There is 1 item in your cart. Braun shaver. Do not exchange or manipulate any part of it. Otherwise there is risk of electric shock. Then recharge to full capacity again subsequent charges will take about The remaining capacity will then be sufficient for 2 to 3 shaves. Please refer to separate use instructions. Press the release buttons to lift the shaver foil Switch on the shaver for approx. 510 seconds so that the shaved stubbles can fall out. Using the brush, clean the cutter block and the inner area of the pivoting head.

About every four weeks, clean the cutter block with Braun cleaning agents. Change both parts at the same time for a closer shave with less skin irritation. Then recharge the shaver to full capacity again. This reconditions the rechargeable battery. In the interest of protecting the environment, please do not dispose of the product in the household Disposal can take place at a Braun Service Centre or at appropriate collection points provided in your country. Nous espérons que vous serez pleinement satisfait Ne changez ou ne manipulez pas ces composants pour éviter tout risque de choc électrique. Ensuite rechargez-le à nouveau pour atteindre la capacité maximale les recharges suivantes prendront environ 1 heure. Cependant, la capacité maximum des batteries sera atteinte seulement après plusieurs cycles de charge et de décharge. Quand la batterie rechargeable est complètement rechargée, le témoin lumineux de charge clignote ou s'éteint. La capacité restante sera alors suffisante pour 2 ou 3 autres rasages. A question I get asked frequently is, How to earn a fishbone diagram word. Well, let me help you out. There are numerous approaches you can do so, but you should start looking into making a word document or word template that has all the ingredients that you will need. This will cost you a few bucks, but if you are starting out with something similar to this, youre essentially throwing money away, as this could save a lot of time later on. Making a template implies that you simply utilize a premade template. You create a series of changes and you receive your document on paper. Then, when you will need a particular diagram, you just alter the template and place your data in the appropriate place. As an example, once youre earning a word document, you need to edit it to include images. This is a really simple way to create a fishbone diagram on word. All you have to do is produce a picture file and then use a graphics program to put it in the document. All you have to do then is to save the file and you have it done!

Now, if you are making a word template, then the following directions are similar, but with one slight difference. In order to create a fishbone diagram over the word, you have to include two lines,

in the term section of the Insert menu, then choose New Document. This is the only difference between the two files. There are also a few different kinds of diagrams you are able to make on word. In order to make a fishbone diagram on the term, you will need to first locate an image then use a graphics program to set it in the document. Once it is in place, you will be able to alter it just like you would any other image. When I was making a fishbone diagram on word, I found a picture for my word record, which was a photograph of a specific fishbone. After I altered the picture, it actually made sense. If you're not familiar with how to make a fishbone diagram about the term, it is possible to discover a lot of tools which may help you make your own tool readily. So, no matter what you require, it is easy to find exactly what you need for creating a fishbone diagram on word. Check out a couple of these several kinds of templates and you'll see just what you want to help you make your diagram word documents. They'll also help you earn different diagrams in your word documents, such as a box diagram and also a letter diagram.
