In my search I came across a great site with online parts schematics for the Virago. Check it out. I tried the link that Yamaguzzi posted, but it didn't work. Did you find one. Haynes writes every book based on a complete teardown of the motorcycle.

As to removing the carburetor float bowl. Remove the four screws holding the bowl and tap the bowl with a screwdriver. If all you are doing is draining water from the carb all you really need to do is remove the drain screw on the float bowl then put it back in place. I cant find a diagram of your carb so I am assuming there is a drain screw. A "very helpful" rating on this answer Thanks!
